

ICOS NETHERLANDS MEDIA KIT

ICOS NETHERLANDS IN BRIEF

The Netherlands delivers three greenhouse gas monitoring sites to the European ICOS-RI network, each with more than a decade of existing high-precision greenhouse gas measurements. These are the Cabauw atmospheric observatory near IJsselstein, the Lutjewad tower in Groningen, and the Loobos ecological site on the Veluwe. In addition, the Netherlands contributes to the Carbon Portal with unique know-how on eScience and numerical modeling.

The Dutch Consortium ICOS-NL consists of ten universities and knowledge institutes: VU University Amsterdam (coordination), University of Groningen, Energy research Centre of the Netherlands (ECN), Wageningen University, Wageningen Environmental Research (Alterra), Utrecht University, Royal Netherlands Meteorological Institute (KNMI), SRON Netherlands Institute for Space Research, Royal Netherlands Institute of Sea Research (NIOZ) and TNO Research. ICOS-NL is financially supported by the ministry of OC&W and NWO.
